Have you ever wondered how to compost at home? Follow this simple guide and get started today!

SO WHAT IS COMPOST, ANYWAY?

Compost is made up of “green” and “brown” organic material that breaks down over time and becomes a natural fertilizer for plants.

GREEN
PROVIDES NITROGEN
Eggshells / Vegetable waste / Fruit scraps / Coffee grounds / Tea bags / Grass clippings

AND

BROWN
PROVIDES CARBON
Wood chips / Sawdust / Twigs / Dead leaves

Find a dry, shady spot near a water source for your compost bin

Add green and brown materials, making sure that larger pieces are shredded

Moisten dry materials as they are added

After 3-6 months, your compost will be ready to use
